Take advantage of the rain showers expected to arrive today. Curl up tonight with one of these great new titles.

**Train your mind for peak performance**

From the book cover: “Whether you’re training to play the piano, speak a foreign language, shoot a target, or master the techniques of fine carpentry, the conditions of your training will affect how successfully you learn and perform…Readers will learn how best to acquire, retain, and transfer knowledge and skills to new situations and through exercises in the form of miniexperiments, they will see firsthand why some learning conditions are better than others.”

**Americanah**

From Publishers Weekly: “Adichie burst onto the literary scene in 2006 with *Half of a Yellow Sun*, her searing depiction of the civil war in Nigeria. Her equally compelling and important new novel follows the lives of that country’s postwar generation as they suffer endemic corruption and poverty under a military dictatorship. An unflinching but compassionate observer, Adichie writes a vibrant tale about love, betrayal, and destiny; about racism; and about a society in which honesty is extinct and cynicism is the national philosophy.”

**Biko: a life**

From Barnes and Noble: “Steve Biko was an exceptional and inspirational leader, a pivotal figure in South African history. As a leading anti-apartheid activist and thinker, Biko created the Black Consciousness Movement, the grassroots organization which would mobilize a large proportion of the black urban population. His death in police custody at the age of just 30 robbed South Africa of one of its most gifted leaders. Although the rudimentary facts of
his life - and death - are well known, there has until now been no in-depth book on this major political figure and the impact of his life and tragic death.”

Exploring sport and exercise psychology

From Barnes and Noble: “This edited volume is intended for psychologists, kinesiologists, physical education specialists, and students interested in exploring opportunities in sport and exercise psychology. It provides an indispensable overview of applications, interventions, and practice issues in this up and coming field. Popular interventions for peak performance (including imagery training, intensity regulation, and goal setting) are featured, along with population-specific advice (includes college and elite athletes), specialization education and training, and tips on how to get started in the field. Leaders in the field have been brought together to comment on their specific areas of expertise.”

Mechanisms of social connection: from brain to group

From the book cover: “Human beings the world over are eager to form social bonds, and suffer grievously when these bonds are disrupted. Social connections contribute to our sense of meaning and feelings of vitality, on the one hand, and — at times — to our anguish and despair on the other. It is not surprising that the mechanisms underlying human connections have long interested researchers from diverse disciplines including social psychology, developmental psychology, communication studies, sociology, and neuroscience. Yet there is too little dialogue among these disciplines and too little integration of insights and findings. This fifth book in the Herzliya Series on Personality and Social Psychology aims to rectify that situation…”

Media and the well-being of children and adolescents

From Barnes and Noble: “Media and the Well-Being of Children and Adolescents brings together many of the field’s most important scholars and media professionals to present cutting-edge theory and empirical research on both the benefits and risks to youth development. It examines the role that media play in the every-day lives of young people and their families, and considers both traditional media such as television and movies as well as "new" digital media, such as video games, cell phones, and the Internet.”
Encyclopedia of the mind

From Library Journal: “This set for college and university students studying cognitive science and related fields is not intended to be a study of the biology of the brain; rather it examines the activities of the mind. Pashler (psychology, Univ. of California, San Diego) won the Troland Award from the National Academy of Sciences for his research in this area. The two- to four-page entries, contributed by a wide range of scholars from across the arts and sciences, cover "topics and perspectives from all the major contemporary disciplines concerned with the study of the mind." Each offers enough information to be useful to those starting to research a topic; the provision of cross references, print and online further-reading suggestions, a short bibliography, and a list of related topics after the articles will allow students to explore the subject in more depth.”

Introduction to world religions, 2nd edition

From Barnes and Noble: “A leading textbook for world religion, this new edition is designed to help students in their study and research of the world's religious traditions. Known and valued for its balanced approach and its respected board of consulting editors, this text addresses ways to study religion, provides broad coverage of diverse religions, and offers an arresting layout with rich illustrations.”

Introduction to remote sensing, 5th edition

From Barnes and Noble: “A leading text for undergraduate- and graduate-level courses, this book introduces widely used forms of remote sensing imagery and their applications in plant sciences, hydrology, earth sciences, and land use analysis. The text provides comprehensive coverage of principal topics and serves as a framework for organizing the vast amount of remote sensing information available on the Web.”
The Encyclopedia of early Earth

From Kirkus Reviews: “The debut graphic novel from author/illustrator Greenberg winkingly follows a master storyteller’s journey through an ancient land of men, gods, magic and love...Her simple, detailed lines contrast with a heavy, matte black, as strategic, restrained color breathes dioramic depth into the pages. The sheer number of tales and the deft paneling (particularly expressive during spell castings) keep the pace brisk and the thrill of discovery palpable.”

An introduction to biological membranes

From Barnes and Noble: “An Introduction to Biological Membranes: From Bilayers to Rafts covers many aspects of membrane structure/function that bridges membrane biophysics and cell biology. Offering cohesive, foundational information, this publication is valuable for advanced undergraduate students, graduate students and membranologists who seek a broad overview of membrane science.”
